FOR IMMEDIATE RELEASE

DESERT MOUNTAIN ENERGY DISCOVERS HYDROGEN FIELD IN ARIZONA

Vancouver, British Columbia — DESERT MOUNTAIN ENERGY CORP. (the “Company”) (TSX.V: DME, U.S. OTC: DMEHF, Frankfurt: QM01) From the President of the Company.

Desert Mountain Energy Corp. (DME) is pleased to announce that it has defined three edges of a Hydrogen field with wells #4 (11-1), #5 (1-1), #6 (10-1). The Company has set and cemented surface and intermediate strings of casing and is in the process of finishing up drilling in the McCauley field. Based on information garnered from drilling operations thus far, the Company is planning on setting and cementing additional production casing to total depth. The well will be drilled to a total depth of approximately 4,000’ into the top of the granite formation.

“Our excellent geologic and drilling team is meeting and hitting our objectives in this well. The company is now six for six in drilling wells in Arizona. We had originally seen multiple hydrogen bearing zones in wells #4 and #5. In well #4 we were not able to sample the hydrogen other than with the mass spectrometer. In well #5 & #6 we were able to see the full spectrum of all known elements and were able to discern that in three hydrogen bearing zones,” says Robert Rohlfing, CEO of DME. “The thickest is approximately 32’ thick of extremely high quality without the presence of sulfur or other elements which would create detrimental issues with future production. Well #4 established the SE corner of the field, well #5 established the eastern edge of the field and well #6 established the SW corner of the field. Our internal geographic modelling has thus far, been within 2’ plus or minus on all helium and hydrogen bearing zones. Therefore, the Company feels that its current private and state leaseholds encompass all of the water-free production areas within the inferred nine to ten square miles of this field for both helium and hydrogen.” Water free production of helium and hydrogen is a key component of long-term operation costs.

The current production of hydrogen comes from steam-methane reforming, electrolysis and bio-mass. Our discovery of basically clean hydrogen in situ makes DME a leader in this

quickly evolving green business. “I am extremely proud of the great strides our engineering, drilling teams and our cementing contractor have made in respect to developing specific techniques using safe, food-grade and higher components for cementing casing in one pass,” says Robert Rohlfig, CEO of DME. “We strive to be the successful innovators of our industry. The company is moving forward, innovating and developing responsible drilling techniques in a cost effective and efficient manner. This serves to protect the surface and aquifers for future generations of Arizonians. In that spirit, we have chosen to work with the various state agencies to develop guidelines, based on our successes in varied downhole environments, then pass on critical information to any company drilling any type of well in Arizona so that the water resources can be protected.” The company will provide additional information on this well after the final casing is set, cemented and the rig moved to the next location.

Hydrogen is much more efficient than gasoline, but it’s four times more expensive. Current pricing for an equivalent gallon of hydrogen compared to a gallon of gasoline is approximately 4 to 1, or \$12 per gallon of hydrogen to \$3 per gallon of unleaded 87 octane gasoline. (Source, calmatters.org).

The Company has transferred its interest in the Oklahoma oil & gas properties to another company for which the company is not required to expend any further monies and will receive an overriding royalty on all future operations from the KGSU.

ABOUT DESERT MOUNTAIN ENERGY

Desert Mountain Energy Corp. is a publicly traded resource company primarily focused on exploration, development and production of helium, hydrogen and noble gases. The Company is primarily looking for elements deemed critical to the renewable energy and high technology industries.

We seek safe harbor

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release. The statements made in this press release may contain certain

forward-looking statements that involve a number of risks and uncertainties. Actual events or results may differ from the Company's expectations.

Cautionary Note Regarding Forward-Looking Statements

This news release contains "forward-looking statements" within the meaning of the United States Private Securities Litigation Reform Act of 1995 and "forward-looking information" within the meaning of applicable Canadian securities legislation. Such forward looking statements and information herein include but are not limited to statements regarding the Company's anticipated performance in the future the planned exploration activities, receipt of positive results from drilling, the completion of further drilling and exploration work, and the timing and results of various activities.

Forward-looking statements or information involve known and unknown risks, uncertainties and other factors that may cause the actual results, level of activity, performance or achievements of the Company and its operations to be materially different from those expressed or implied by such statements. Such factors include, among others, changes in national and local governments, legislation, taxation, controls, regulations and political or economic developments in Canada and the United States; financial risks due to helium prices, operating or technical difficulties in exploration and development activities; risks and hazards and the speculative nature of resource exploration and related development; risks in obtaining necessary licenses and permits, and challenges to the Company's title to properties.

Forward-looking statements are based on assumptions management believes to be reasonable, including but not limited to the continued operation of the Company's exploration operations, no material adverse change in the market price of commodities, and such other assumptions and factors as set out herein. Although the Company has attempted to identify important factors that could cause actual results to differ materially from those contained in forward-looking statements or information, there may be other factors that cause results to be materially different from those anticipated, described, estimated, assessed or intended. There can be no assurance that any forward-looking statements or information will prove to be accurate as actual results and future events could differ materially from those anticipated in such statements or information. Accordingly, readers should not place undue reliance on forward-looking statements or information. The Company does not intend to, and nor does not assume any obligation to update such forward-looking statements or information, other than as required by applicable law.
