### ABOUT IMAGE RESOURCES

Image Resources NL is a mineral sands focused miner and supplier of critical minerals titanium dioxide, zircon and monazite containing rare earth elements for sale into global markets. The Company has a demonstrated track record of successful project development and operations at its Boonanarring project located 80km north of Perth in the infrastructure rich North Perth Basin.

Boonanarring was a high-grade, high-zircon, low capital cost mine development that was constructed on-time and on-budget in CY2018 and then ramped up to name plate capacity in the second month of operation and went on to operate profitably through Q3 2023. Debt for the project was paid off early in February 2021 and the Company paid dividends to shareholders in April 2021 and April 2022.

Image is currently developing the Atlas project and will be commissioning the project, ramping up production, and achieving first revenue from Atlas in 1H CY2025.

Chapter 1 operating strategy for Image involved the transition from advanced explorer to active miner in CY2018, operating one mine at a time, and producing a single product (HMC) sold into a single jurisdiction (China). Chapter 2 strategy (post Atlas) focuses on growth and sustainability ambitions which includes the operation of multiple mines in parallel, producing multiple products (separating HMC), and selling into a global market.

The Company is also investigating a significant value adding step of upgrading its ilmenite to synthetic rutile using a lower GHG emissions, innovative process which Image has provisionally patented, and aims to demonstrate the technical and economic feasibility of this novel process in CY2025-26.
